hypotherical protein At2939300 [imported] - Arabidopsis thaliana
NyAlternate names: hypothetical protein T16B24.6
Cispecies: Arabidopsis thaliana (mouse-ear cress)
Cibate: 05-Mar-1999 #sequence_revision 05-Mar-1999 #text_change 16-Feb-2001
CiAccession: T02572; F84815
Richarly, S.D.; Kaul, S.; Lin, X.; Ketchum, K.A.; Crosby, M.L.; Brandon, R.C.; Sykes, Esubmitted to the EMBL Data Library, August 1998
A;Description: Arabidopsis thaliana chromosome II BAC T16B24 genomic sequence.
A;Reference number: 214679
A;Accession: T02572
A;Status: translated from GB/EMBL/DDBJ
A;Accession: T02572
A;Status: Lanslated from GB/EMBL/DDBJ
A;Cross-references: EMBL:Accod4697; NID:g3402677; PID:g3402677
A;Experimental source: cultivar Columbia

tropomyosin alpha chain - axolotl
C; Species: Ambystoma mexicanum (axolotl)
C; Decies: 19-May-1995 #sequence_revision 14-Jul-1995 #text_change 13-Aug-1999
C; Accession: JC2551
R; Luque, E.A.; Lemanski, L.F.; Dube, D.K.
Biochem. Biophys. Kes. Commun. 203, 319-325, 1994
A; Title: Molecular cloning, sequencing and expression of an isoform of cardiac alpha-trop
A; Reference number: JC2551; MUID:94354820; PMID:8074673

"Mouse pl56Clude (dynactin 1) cDNA sequence and evaluation as a
condidate for the neuromuscular disease mutation mnd2.";

Biochem. Blophys. Res. Commun. 231:344-347(1997).

-! FONGTION: Required for the cytoplasmic dynacin-driven retrograde
movement of vesicles and organelles along microtubules. Dynacin-dynactin interaction is a key component of the mechanism of axonal
transport of vesicles and organelles.

-!- SUBUNIT: Large macromolecular complex of at least 10 components;
p150(glued) binds directly to microtubules and to cytoplasmic
15-JUL-1998 (Rel. 36, Last sequence update)
28-FEB-2003 (Rel. 41, Last annotation update)
Dynactin 1 (150 kDa dynein-associated polypeptide) (DP-150) (DAP-150)
DCTN1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

"Mutant dynactin in motor neuron disease.";
Nat. Genet. 33:455-456(2003).
-!- FUNCTION: Required for the cytoplasmic dynein-driven retrograde movement of vesicles and organelles along microtubules. Dynain-dynactin interaction is a key component of the mechanism of axonal transport of vesicles and organelles.
-!- SUBUNIT: Large macromolecular complex of at least 10 components;
-!- SUBUNIT: Large macromolecular complex of at least 10 components;
p150(glued) binds directly to microtubules and to cytoplasmic
                                                                                                                                                                                                                                                                                                                                                                                                                          Holzbaur E.L.F., Tokito M.K.; "Localing pl50Glued to human chromosome "Localization of the DTTN1 gene encoding pl50Glued to human chromosome 2pl3 by fluorescence in situ hybridization."; Genomics 31:398-399(1996).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DISEASE: Defects in DCTN1 are the cause of progressive lower motor neuron disease (PLMND) [MIM:607641]. PLMND is a progressive dominant disease that has no sensory symptoms.

SIMILARITY: Belongs to the dynactin 150 KDa subunit family. SIMILARITY: Contains I CAP-Gly domain.
                                                                                        (DAP-150)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          M.,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Fister K.K., Vallee R.B., Submarback J.A., Paschal B.M., Kravit N.G., Pfister K.K., Vallee R.B., Submitted (DEC-1996) to the EMBL/GenBank/DDBJ databases.

-!- FUNCTION: Required for the cytoplasmic dynatin-driven retrograde movement of vesicles and organelles along microtubules. Dynein-dynactin interaction is a key component of the mechanism of axonal transport of vesicles and organelles.

-!- SUBUNIT: Large macromolecular complex of at least 10 components; p150(glued) binds directly to microtubules and to cytoplasmic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  01-AUG-1992 (Rel. 23, Created)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         rad50/mre11 complex possesses single-strand endonuclease activity and ATP-dependent double-strand-specific exonuclease activity. Mad50 provides an ATP-dependent control of mre11 by unwinding and/or repositioning DNA ends into the mre11 active site. SubdNIT: Forms a complex with mre11.
SIMILARITY: Belongs to the SMC family. RAD50 subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                             3 KKKGLSAE--EKRTRMMEI-FSETKDV-FQLKDLEKI-----APKEKGITAMSVKE

Call Sci. 115:3275-3284 (2002).
-!- FUNCTION: Probably plays an important role in centrosome cohesion during interphase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   vitro with both NEX2 kinage and the PPPICC catalytic subunit of protein phosphatase 1 (PPI).

-!- SUBGELLUIAR LOCATION: Component of the core centrosome. In interphase cells, it specifically associates with the proximal ends of both mother and daughter centrioles. Associates with the centrosome in interphase cells. In mitotic cells, it dissociates from the mitotic spindle poles. At the end of cell division, it reaccumulates at centrosomes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 MEDLINE=21060765; PubMed=10880350;

                                                                                                                     Note-No experimental confirmation available;
TISSUE SPECIFICITY: Ubiquitously and weakly expressed.

FTM: Differentially phosphorylated during cell cycle.

Phosphorylation may regulate association/dissociation from centrosome. During M phase of mitosis, C-terminal part is phosphorylated by NEK2, suggesting that it may trigger the dissociation from the mitotic centrosome. It is dephosphorylated in vitro by the PPI phosphatase.

DISEASE: Antibodies against CEP2 are present in sera from patients with autoimmune diseases that developed autoantibodies against
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

rad50/mrell complex possesses single-strand endonuclease activity and APP-dependent double-strand-strand-endonuclease activity.

Rad50 provides an APP-dependent control of mrell by unwinding and/or repositioning DNA ends into the mrell active site (By
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Archaea; Buryarchaeota; Thermococci; Thermococcales; Thermococcaceae;

"Sequencing a cosmid clone of Saccharomyces cerevisiae chromosome XIV
"Sequencing a cosmid clone of Saccharomyces cerevisiae chromosome XIV
reveals 12 new open reading frames (ORFs) and an ancient duplication
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         FUNCTION: Not known.
SUBUNIT: Homodimer (By similarity).
DOMAIN: The molecule is in a coiled coil structure. The sequence exhibits a prominent seven-residues periodicity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                MEDLINE=89195234; PubMed=2649250;

Plays a central role, in association with the troponin complex, in the collection dependent regulation of vertebrate striated muscle contraction. Smooth muscle contraction is regulated by interaction with caldesmon. In nonmuscle cells is implicated in stabilizing cytoskeleton actin filaments. SUBUNIT: Heterodimer of an alpha and a beta chain.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Isold=P42639-1; Sequence=Displayed;
DOWAIN: The molecule is in a coiled coil structure. The sequence exhibits a prominent seven-residues periodicity.
SIMILARITY: Belongs to the tropomyosin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Eukaryota, Metazoa, Chordata, Craniata, Vertebrata, Euteleostomi,

The sequence atthibites a prominent seven-residues periodicity.

DISEASE: THE AMINO END OF ISOFORM 2 HAS BEEN FOUND FUSED WITH THE PROTEIN TYROSINE KINASE DOMAIN ENCODED BY NTRK1. THESE SOMATIC PROTEIN.

DISEASE: Defects in TPM3 are a cause of nemaline myopathy type (NEM1) [MIM:161800]. NEM1 is an autosomal dominant noinprogressive form of congenital myopathy with abnormal threadlike structures (nemaline rode) in muscle cells on histologic examination.

SIMILARITY: Belongs to the tropomyosin family.

FUNCTION: Binds to actin filaments in muscle and nonmuscle cells. Plays a central role, in association with the troponin complex, in the calcium dependent regulation of vertebrate striated muscle contraction. Smooth muscle contraction is regulated by interaction with caldesmon. In nonmuscle cells is implicated in stabilizing SUBGNUT: Heterodimer of an alpha and a beta chain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Pfan, PF00261; Tropomyosin; 1.

Isoid=P21107-2; Sequence=VSP_006608, VSP_006610;
SMAIN: The molecule is in a coiled coil structure. The sequence exhibits a prominent seven-residues periodicity.
SIMILARITY: Belongs to the tropomyosin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        72; Indels 56; Gaps

Ohara O., Dorit R.L., Gilbert W.;
"One-sided polymerase chain reaction: the amplification of cDNA.";
Proc. Natl. Acad. Sci. U.S.A. 86:5673-5677 (1989).
-!- FUNCTION: Binds to actin filaments in muscle and nonmuscle cells.
- Plays a central role, in association with the troponin complex, in the calcium dependent regulation of vertebrate striated muscle contraction. Smooth muscle contraction is regulated by interaction with caldesmon. In nonmuscle cells is implicated in stabilizing cytoskeleton actin filaments.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1 MSKKKGLSAE---EKRTRMMEIFSETKDVFQ------LKDLEKIAPK-EKGITAMSV

                                                                                                                                                                                                                                                                                                                                                                       -!- SUBUNIT: Heterodimer of an alpha and a beta chain.
-!- DOMAIN: The molecule is in a colled coil structure. The sequence exhibits a prominent seven-residues periodicity.
-!- SIMILARITY: Belongs to the tropomyosin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Rana temporaria (European common frog).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          47
                                                                                                                                                                                                                                      contraction. Smooth muscle contraction is regulated by interaction with caldesmon. In nonuscle cells is implicated in stabilizing cytoskeleton actin filaments.
                          Ohara O., Dorit R.L., Gilbert W.;
"One-sided polymerase chain reaction: the amplification of cDNA.";
Proc. Natl. Acad. Sci. U.S.A. 86:5673-5677(1989).
-!- FUNCTION: Binds to actin filaments muscle and nonmuscle cells.
- Plays a central role, in association with the troponin complex, in the calcium dependent regulation of vertebrate striated muscle
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1 MSKKKGLSAE---EKRTRMMEIFSETKDVFQ-----LKDLEKIAPK-EKGITAMSV

SEQUENCE 284 AA, 32664 MW; D036806D9FC32D55 CRC64;
                                                                                                                                                                                                                                                                                                                                                     -1- SÜBÜNIT: Heterodimer of an alpha and a beta chain.
-1- DÖMÄIN: The molecule is in a coiled coil structure.
exhibits a prominent seven-residues periodicity.
-1- SIMILARITY: Belongs to the tropomyosin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (Rel. 31, Last sequence update) (Rel. 40, Last annotation update)

-!- DOMAIN: The predominant structure is alpha-helical.
-!- POLYWORPHISM: Length polymorphisms exist between different
strains, most likely caused by length variations within the tandem
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         'Ari 'Ari' C: Cytoplasm; IDA.

FUNCTION: Binds to actin filaments in muscle and nonmuscle cells. Plays a central role, in association with the troponin complex, in the calcium dependent regulation of vertebrate striated muscle contraction. Smooth muscle contraction is regulated by interaction with caldesmon. In nonmuscle cells is implicated in stabilizing cytoskeleton actin filaments.

SUBDWIT: Heterodimer of an alpha and a beta chain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                     ELVALQKKIKGTEDELDKYSEALKDAQEKLELSDKKATD

-!- DOMAIN: The molecule is in a colled coil structure. The sequence exhibits a prominent seven-residues periodicity.
-!- SIMILARITY: Belongs to the tropomyosin family.

Condense chromosomes. The condensin complex probably introduces condense chromosomes. The condensin complex probably introduces positive superscoils into relaxed DNA in the presence of type I topoisomerases and converts nicked DNA into positive knotted forms in the presence of type II topoisomerases.

J. SUBDITI: Forms an heterodimer with SNG-411. Component of the condensin complex, which contains the SNG-211 and SNG-411 heterodimer, and three non SNC subunits that probably regulate the complex: BRRMI/CAPH; CARPI, CARPI, CARPI, CARPI, CARPI, CARPI, CARPI, CARPI, CARPI, CARPI, CARPI, CARPI, CARPI, CARPI, CARPI, CARPI, CARPI, CARPI, CARPI, CARPI, CARPI, CARPI, CARPI, CARPI, CARPI, CARPI, CARPI, CARPI, CARPI, CARPI, CARPI, CARPI, CARPI, CARPI, CARPI, CARPI, CARPI, CARPI, CARPI, CARPI, CARPI, CARPI, CARPI, CARPIDER, IN Nuclear and cytoplasmic. In interphase cells, the majority of the condensin complex is associated with the chromosome foci in interphase cells. During mitosis, most of the condensin sassociated with chromosome foci in interphase condensin's association with chromosome arms and to chromosome condensin's association with chromosome arms and to chromosome condensin's association with chromosome arms and to chromosome condensin's condensition.

DOMAIN: The hinge domain, which separates the large intramolecular coiled coil regions, allows the heterodimerization with SMC4LL, forming a V-shaped heterodimer (By similarity).
SIMILARITY: Belongs to the SMC family. SMC2 subfamily.

                                                                                                                  Isoid=P09493-4; Sequence=VSP_006577;
-!-DOMAIN: The molecule is in a colled coil structure. The sequence exhibits a prominent seven-residues periodicity.
-!- MASS SPECTROMETRY: MW=32875.93; METHOD=MALDI; RANGE=Isoform 3.
-!- DISEASE: DEFECTS IN TPM1 ARE OND OF THE CAUSES OF FAMILIAL HYPERTROPHIC CARDICOMYOPATHY (FHC) WHICH IS AN AUTOSOWAL DOMINANT DISORDER CHARACTERIZED BY INCREASED MYOCARDIAL MASS WITH MYOCYTE AND MYOFISTILLAR BISARRAY. IT IS ASSOCIATED WITH TYPE 3 (CMH3). IT: SIMILARITY: Belongs to the tropomyosin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       KCAELEEELÄTVTNNIKSLEAQAE -> QVRQLEEQLRIND

Jr.;
"Construction of an atcomic model for tropomyosin and implications for "Construction of an atcomic model for tropomyosin and implications for interactions with actin.";
J. Mol. Biol. 192-128-131 (1986).

-!- FUNCTION: Binds to actin filaments in muscle and nonmuscle cells. Plays a central role, in association with the troponin complex, in the calcium dependent regulation of vertebrate striated muscle contraction. Smooth muscle contraction is regulated by interaction with caldesmon. In nommuscle cells is implicated in stabilizing cytoskeleton actin filaments.
-!- SUBUNIT: Heterodimer of an alpha and a beta chain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                -!- DOMAIN: The molecule is in a colled coil structure. The sequence exhibits a prominent seven-residues periodicity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SEQUENCE OF 103-146 FROM N.A.
